

3 months ago

Hi [REDACTED]

Thank you for your patience.

Please see below response for your queries-

1- What does “employer recognition” concretely mean within hiring evaluation systems when certificate holders apply to roles tagged with the credential?

The Google Career Certificates team works with a consortium of employers (more info at grow.google/employers). Employers can join this consortium to access skilled Google Career Certificate talent pipelines, as well as work with the Google Career Certificate team to contribute to Certificate development or beta testing, to validate that the skills taught are those that are required for roles in these fields.

2- What practical interface, if any, exists when the certificate is associated with specific opportunities?

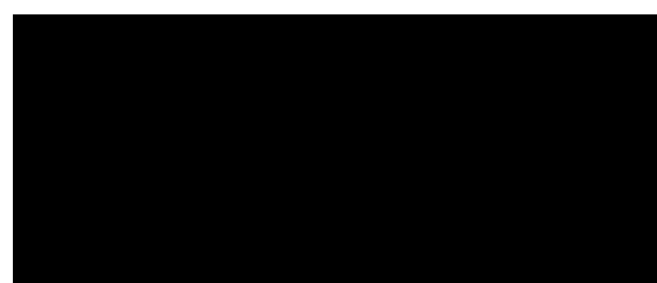

It is assumed this is referring to tagging specific certificates to roles within Career Circle. Practically speaking, the Google Career Certificates team, in partnership with Career Circle, will highlight roles that graduates of Google Career Certificate programs may be interested in based on the Certificate they completed.

3- What operational meaning does role tagging with the certificate carry within evaluation processes?

It is assumed this is referring to the tagging of roles on Career Circle. This tagging indicates if an employer company is a member of the Google Career Certificate employer consortium. The Google Career Certificates and Career Circle team work closely within this network of employers to build hiring pipelines and to drive career outcomes for graduates.

Regards,

[REDACTED] from the Google Career Certificates team

Dear [REDACTED]

Thank you for your continued engagement and for the responses provided.

I am writing to formally acknowledge receipt of the definitions supplied regarding “employer recognition,” the practical interface between the certificate and opportunities, and the meaning of role tagging.

Those definitions, now established in the record, form the basis of the inquiry as defined.

I. A Procedural Observation

The Google Skills Support team has previously clarified that its scope is limited to learner support matters, including certificates, curriculum, and labs. The record reflects agreement that this inquiry falls outside those boundaries. The matter has subsequently been indicated as progressing toward handling at the level of program accountability.

Notwithstanding that stated limitation of scope, the most recent response provides program-level definitions. This has introduced a structural ambiguity which requires resolution.

The inquiry has been treated as both outside the authority of learner support and yet substantively addressed within it. The dual posture bears directly on the question of where responsibility for program representations resides.

To date, no identifiable receiving function, confirmation of receipt beyond initial transmission, or subsequent outreach from such a program-level function has been established in the record. This includes any confirmation of accessibility or assumption of responsibility by a program-level authority.

II. The Substance of the Definitions

Turning to the definitions provided:

A.) “Employer recognition” has been described in terms of employer participation in a consortium, including access to talent pipelines and contribution to certificate development and validation.

B.) The “practical interface” has been described as the highlighting of roles via CareerCircle based on the certificate completed.

C.) “Role tagging” has been described as an indication that an employer is part of the consortium and that such affiliation supports hiring pipelines and career outcomes.

Taken together, these descriptions are informational in nature.

They establish the existence of a consortium, the presence of role visibility mechanisms, and an affiliation signal between employers and the program.

They do not establish any operational mechanism through which the certificate functions in opportunity evaluation when acted upon in reliance on those opportunity representations for enrollment. This includes any mechanism by which the certificate alters, informs, or participates in any such opportunity evaluative processes.

In fact, no mechanism has been identified whereby:

- Possession of the certificate is registered within employer-side evaluation systems.
- The certificate confers any form of consideration, weighting, filtering, or prioritization.
- Role tagging corresponds to any structured interaction beyond visibility.
- The described “pipeline” produces a defined interface between opportunity framing and opportunity evaluation.

In effect, the functional layer that would connect the certificate to hiring evaluation processes at the level of the promised individual has not been defined in the response.

This distinction is central.

Consortium participation and their reasons for involvement, including curriculum alignment, while meaningful in a general sense, do not in themselves establish an operational pathway unless coupled to mechanisms that act upon individual opportunity within hiring processes.

Accordingly, the present record reflects a lack of defined correspondence between representational framing and the operational descriptions now provided.

A system that provides visibility is not equivalent to a system that participates in evaluation. System evaluation relates to opportunity recognition, pathways, and alignment; system visibility is limited to highlighting and affiliation without defined evaluative effect.

III. The Unresolved Question of Program-Level Authority

The earlier indication that this matter had been forwarded to a dedicated team has not resulted in any observable escalation outcome or contact from a program-level authority.

As such, it remains unclear whether a distinct function within the Grow with Google / Career Certificates program holds responsibility for addressing questions of this nature, or whether such accountability is intended to reside within the current support channel.

IV. Warranties Requested

In light of the above, the following is warranted consideration;

- 1.) Whether any operational mechanism exists, and if so, to describe that mechanism in concrete terms, by which the Google Cybersecurity Certificate is intended to influence or interface with employer opportunity evaluation systems when applicants apply to roles associated with the program.
- 2). Whether role tagging and CareerCircle visibility are intended to constitute the entirety of the “practical interface” referenced in program materials, or whether additional, non-visible processes are in place.
- 3.) Whether a program-level team with authority over marketing representations and employer consortium positioning is available to provide a definitive response, and if so, whether this inquiry can be directed to that function with confirmation of receipt.

These questions directly result from the definitions provided. They are necessary to establish whether the opportunity framework presented at the point of enrollment corresponds to a defined operational structure.

V. Closing.

My intent remains ensuring that the relationship between program representation and functional reality is clearly understood for establishing the integrity of the certificate program and the credential.

I reiterate once again my deep appreciation for your professionalism and further note the strength of the consideration you have shown my engagement throughout this process

Sincerely,
