

3 months ago

Dear Grow with Google / Career Certificates Team,

I am writing to bring resolution to this inquiry in a manner that reflects both the substance of what has been established and the integrity with which this engagement has been conducted.

As I shared with [REDACTED] early in this process, "My goal remains the resolution of this matter in a way that aligns with Google's mission" [REDACTED] Feb 2026).

Re: [Google Skills Support] Re: [NA]Re: [Google Skills Support... <https://qwiklab.zendesk.com/hc/en-us/requests/4835894?bra...>

That principle has guided every interaction and continues to inform this communication.

I. What Has Been Established

Over the course of this engagement, the relationship between how the Google Cybersecurity Certificate is presented and how it functions in practice has been clarified:

- The program is positioned as offering employer recognition, connection to hiring pathways, and role-level relevance within a consortium of participating organizations.
- The operational structure, as defined and observed, is limited to curriculum alignment, consortium affiliation, and candidate-facing visibility.
- The marketed interface between credential and opportunity redirects applicants to employer-controlled systems without transmitting credential-linked information. No ATS integration, token, or signal flows from the interface into employer evaluation systems.

Accordingly, no mechanism has been identified by which the certificate participates in, informs, or otherwise interfaces with employer-side evaluation processes when applications are submitted.

This represents a structural misalignment between representation and operational function.

This conclusion is independent of outcome, expectation, or individual circumstance. The record is internally complete and does not depend on further clarification or engagement as it stands.

II. Opportunity for Alignment

In my correspondence with [REDACTED] I stated, "I am committed to reaching a mutually agreeable understanding with Google" [REDACTED] Feb 2026).

I remain mindful that institutions benefit from the space to reflect and, where appropriate, bring external representations into alignment with internal structure.

As such:

If the program's representational framing is adjusted to accurately reflect its operational reality—specifically, that visibility and consortium affiliation do not constitute participation in employer-side evaluation where no such mechanism exists—

- Then I will consider the matter fully resolved on my end.
- No response or direct communication is required for this resolution.
- A reasonable observation period of twenty (20) days will be allowed for any such alignment.

Should this alignment occur, I will treat the resolution as complete and confidential, without public characterization or inference of admission.

III. Next Steps if No Alignment Occurs

If no adjustment is made, I will proceed independently with submission of the completed record to the following external bodies:

- 1.) Federal Trade Commission (FTC)
- 2.) Consumer Financial Protection Bureau (CFPB)
- 3.) State of Washington Department of Financial Institutions (WA DFI)
- 4.) State of Washington Office of the Attorney General
- 5.) State of California Office of the Attorney General

This reflects the natural continuation of a complete record, without opportunity for resolution.

IV. Evidence Attachment

For clarity and completeness, a limited excerpt from the audit is attached as an objective representation of the operational reality.

This evidences the structural impossibility of the represented connection at the center of the misalignment.;

- A credential-linked tag is displayed on a job listing within the interface or job board.
- Selecting the role redirects the applicant to the employer's public career page.
- The applicant creates a new account; no credential signal is transmitted.
- The application proceeds through the employer's ATS with no information from the originating interface.

The excerpt demonstrates mechanically that the platform interface does not transmit credential-linked data into employer processes.

V. Closing

I appreciate the professionalism shown by all those who have engaged with this inquiry at all levels.

My intention has consistently been to ensure alignment between what is represented and what is operationally true for the integrity of the Google Cybersecurity Certificate and the credential.

Sincerely,

[REDACTED]

Google Cybersecurity Certificate & CompTIA Security+ dual Credential
