Opportunity for Alignment and Internal Resolution

Email Correspondence | M.S. → Programme Support Team

OBSERVATION TERMS

Observation Terms: No communication requirement. The institution was granted a 20-day grace period to correct the programme's marketing representations independently. Correction within the observation period would constitute full resolution, treated with complete confidentiality by M.S. No response or acknowledgment was required of the institution during this period.

To: careercertsupport@google.com, growwithgoogle@google.com

Cc: legal-notices@google.com, Google Skills Support <support+id2PER2K-ZV1V9@qwiklab.zendesk.com>

Dear Grow with Google / Career Certificates Team,

I am writing to bring resolution to this inquiry in a manner that reflects both the substance of what has been established and the integrity with which this engagement has been conducted.

As I shared with Shakir early in this process, "My goal remains the resolution of this matter in a way that aligns with Google's mission" (Shakir, Feb 2026).

That principle has guided every interaction and continues to inform this communication.

I. What Has Been Established

Over the course of this engagement, the relationship between how the Google Cybersecurity Certificate is presented and how it functions in practice has been clarified:

- The program is positioned as offering employer recognition, connection to hiring pathways, and role-level relevance within a consortium of participating organizations.
- The operational structure, as defined and observed, is limited to curriculum alignment, consortium affiliation, and candidate-facing visibility.
- The marketed interface between credential and opportunity redirects applicants to employer-controlled systems without transmitting credential-linked information. No ATS integration, token, or signal flows from the interface into employer evaluation systems.

Accordingly, no mechanism has been identified by which the certificate participates in, informs, or otherwise interfaces with employer-side evaluation processes when applications are submitted.

This represents a structural misalignment between representation and operational function.

This conclusion is independent of outcome, expectation, or individual circumstance. The record is internally complete and does not depend on further clarification or engagement as it stands.

II. Opportunity for Alignment

In my correspondence with Megha, I stated, "I am committed to reaching a mutually agreeable understanding with Google" (Megha, Feb 2026).

I remain mindful that institutions benefit from the space to reflect and, where appropriate, bring external representations into alignment with internal structure.

As such:

If the program's representational framing is adjusted to accurately reflect its operational reality—specifically, that visibility and consortium affiliation do not constitute participation in employer-side evaluation where no such mechanism exists—

- Then I will consider the matter fully resolved on my end.
- No response or direct communication is required for this resolution.
- A reasonable observation period of twenty (20) days will be allowed for any such alignment.

Should this alignment occur, I will treat the resolution as complete and confidential, without public characterization or inference of admission.

III. Next Steps if No Alignment Occurs

If no adjustment is made, I will proceed independently with submission of the completed record to the following external bodies:

- 1.) Federal Trade Commission (FTC)
- 2.) Consumer Financial Protection Bureau (CFPB)
- 3.) State of Washington Department of Financial Institutions (WA DFI)
- 4.) State of Washington Office of the Attorney General
- 5.) State of California Office of the Attorney General

This reflects the natural continuation of a complete record, without opportunity for resolution.

IV. Evidence Attachment

For clarity and completeness, a limited excerpt from the audit is attached as an objective representation of the operational reality.

This evidences the structural impossibility of the represented connection at the center of the misalignment.;

- A credential-linked tag is displayed on a job listing within the interface or job board.
- Selecting the role redirects the applicant to the employer's public career page.
- The applicant creates a new account; no credential signal is transmitted.
- The application proceeds through the employer's ATS with no information from the originating interface.

The excerpt demonstrates mechanically that the platform interface does not transmit credential-linked data into employer processes.

V. Closing

I appreciate the professionalism shown by all those who have engaged with this inquiry at all levels.

My intention has consistently been to ensure alignment between what is represented and what is operationally true for the integrity of the Google Cybersecurity Certificate and the credential.

Sincerely,
Mohamed S. Mohamed
Google Cybersecurity Certificate & CompTIA Security+ dual Credential

Attachment: Appendix — Mechanical Architecture Excerpt

 **Excerpt_Mechanical_Architecture_Excerpt.PDF**
223K

Dimension	Marketing Representation	Operational Reality per Google's Own Definitions	Classification
Google as Employer	Google hires certificate graduates (Pichai, February 17, 2022)	Mechanically impossible, no credential token, SSO; no preferential pipeline	Direct Contradiction
Outcome Statistic	75% achieve positive career outcome within six months	Self-reported; commercially surveyed; definition includes unrelated events; 2022 data applied in 2026	Statistical Integrity Issue

2.4 The Mechanical Impossibility Finding

The following describes the CareerCircle application sequence as experienced and documented by the inquirer. It constitutes the mechanical proof of the Design-Marketing Gap, independent of [REDACTED] definitions.

1. A credential-linked tag is displayed on a job listing within CareerCircle, associated with the applicable Google certificate (e.g., Google Cybersecurity Certificate on security roles).
2. Clicking the role or the tag redirects the user entirely out of CareerCircle to the employer's own public career page, the same page accessible by any member of the public without a Google certificate.
3. The applicant is required to create a fresh account directly with the employer. No single sign-on, credential token, or pipeline identifier carries forward from CareerCircle.
4. The application proceeds through the employer's own Applicant Tracking System. No data is transmitted from CareerCircle into that system. The ATS receives an application from an anonymous individual with no indication of CareerCircle origin, Google certificate status, or consortium context.

Mechanical Conclusion

The platform represents a direct connection between certificate holders and employers. The platform's architecture makes that connection mechanically impossible. No information about the certificate or the applicant travels from the platform that holds it into the system that processes applications. The represented connection is not a function that failed, it is a function that the system was never built to perform. The representation therefore does not describe an unfulfilled promise. It describes a non-existent mechanism.

This finding is independent of outcome quality, individual circumstances, or market conditions. It rests on the observable fact that the application process exits the credential-aware system before the employer's evaluation system is engaged. The tag tells the applicant which roles to consider. It tells the employer nothing. The direction of information flow is opposite to what the marketing implies.

Today is the 17th day of the Opportunity Alignment observation graciously offered to the Institution of my respect.

I offer here the concluding appendix to the record.

APPENDIX — NORMATIVE FRAMEWORK

On The Relationship Between Obligation and Representation and The Basis for Integrity in Their Exchange in The Digital Credential Ecosystem

April 30, 2026

I. Purpose

This appendix provides the normative framework through which the established findings should be interpreted.

It addresses the obligations that arise when representations of opportunity, alignment, or pathway participation concern reasonable reliance that presupposes some degree of corresponding operational coherence sufficient to sustain the meaning of the representation as it is reasonably understood.

The purpose is not evidentiary expansion, but interpretive clarification.

It offers a structured analytical framework through which institutional communication, consumer interpretation, and operational architecture may be evaluated as a single, unified, coherent system.

II. Communication As a Feature

The structural condition identified is characteristic of a feature in which there is communication regarding:

- association between opportunity and outcome at the level of representation,
- integration between validation and verification at the level of operation,
- synergy between promise and pathway at the level of probabilistic framing,
- linkage between architecture and alignment at the level of signaling.

This condition may produce an impression of systemic coordination which requires full substantiation with operational architecture.

It reflects a system in which opportunity products are positioned through narratives of recognition, access, and opportunity and their alignment and integration within opportunity evaluative mechanisms.

III. Normative Considerations of Reliance

The relevant normative standard is one of representational correspondence.

In particular, when institutions communicate employer recognition, hiring alignment, pathway participation, or opportunity proximity, such representations should either:

- A.) correspond with verifiable operational mechanisms, or
- B.) be clearly bounded to reflect their actual functional scope.

This principle does not extend institutional responsibility into labor-market dynamics or their uncertainties.

It is normatively grounded in the ethics of reliance.

When representations materially shape participation and decision-making, their operational meaning should remain legible.

Accordingly, calibrated disclosure requires meaningful distinction between:

- credential attainment,
- signaling or visibility effects,
- probabilistic labor-market positioning, and
- the state of direct opportunity mechanism integration

Where no such integration exists, representational framing should correspond to functional equivalence.

V. The Matter of Ambiguity in Governance

A structural reading of the dynamics reflected in this record identifies the condition of managing semantic determinancy.

Under such a condition, value may be generated through representations that are sufficiently broad to support aspirational interpretation, where operational determinacy may reflect independence from any specific functional mechanism.

This does not necessarily imply intentional misrepresentation in the conventional sense.

Rather, conditions arise in which consumers may reasonably infer forms of coordination that position functionally with the structure to fully define, or govern in totality.

Where:

- A.) individuals reasonably interpret representational framing as meaningful enough to shape decision-making,
- B.) ambiguity in operational correspondence becomes ethically relevant.

In this regard, as a matter of procedural inquiry, this document is significant as a record of a sustained attempt to resolve that ambiguity regarding representational claims and their operational meaning.

What emerges is not merely concern with a single mechanism, but with the broader coherence of institutional architecture.

This is significant as a matter of systems and structures, and is necessary for ensuring reliability across representational framing, consumer interpretation, and operational structure.

Representational integrity cannot be fully maintained unless functions can be identified for maintaining alignment between credential, communication, capability, and coherence.

This appendix provides the normative framework through which the broader significance of the record may be understood.

The evidentiary material establishes the factual and procedural basis of the inquiry. This framework clarifies its institutional relevance.

At its core, the record raises a narrow but generalizable question:

When opportunity is represented as functionally connected to credential attainment, what obligations arise when individuals rely upon that representation in good faith?

The position advanced here is restrained but rigorous.

It does not:

- assert guaranteed outcomes,
- assign fault for labor-market uncertainty,
- propose determinism in employment systems.

It advances the reasonable principle requiring coherence between representation, reliance, and reality.

Between:

- framing and capacity,
- promise and mechanism,
- implication and structure.

This requirement is minimal, but foundational for sustainable trust, participation, and economic value derived from representations of opportunity.

Attached is the concluding Human Dimension element of the correspondence.

Sincerely,

Mohamed S. Mohamed

Google Cybersecurity Certificate & CompTIA Security+ dual Credential

The_Human_Dimension.PDF

120 KB

Addendum: The Human Dimension

This addendum is submitted as part of the complete record. It documents the relational dimension of the engagement, not as a cause of action, but as evidence of character, treatment, and as context for any public account of this matter.

Throughout an extended period of engagement, the inquirer upheld what he characterized as 'sustained, deliberate human regard' toward every Google agent he encountered. He extended patience, gratitude, and formal courtesy consistently, including toward agents whose responses were subject to procedural clarification. He praised agents individually while holding the matter to rigorous structural accountability. He ruled out personal legal action in good faith to afford the institution space for voluntary consideration. He gave Google the first right of response before committing to any other submission.

The system response to this conduct was, ultimately, procedural closure without communication, a status change in a ticketing system, with no acknowledgment of the level of conduct that had been demonstrated.

In the inquirer's own words, entered into the record: 'The closure of the inquiry without communication, subject only to a status change, reduces the exchange to a purely transactional encounter. Throughout my engagement, I have upheld the dignity of every single individual agent of Google who intersected with this matter. This was not incidental, nor accidental, neither strategic, nor a tactic; it reflects an operating standard internalized for conditions of sustained, deliberate human regard.'

This relational dimension is relevant to any public narrative account of this case. A system that cannot distinguish between a frustrated customer and a person of demonstrable integrity, engaging in good faith over extensive period, has confirmed through its own behavior the structural finding the audit documents analytically: the accountability architecture has no mechanism for recognizing what it is encountering.

The finding stands on its legal and evidentiary merits. The relational dimension is offered as context, for regulators, for journalists, and for the public record, because it answers the question that legal analysis alone cannot: what kind of person built this record, and why.

Record Finalization Notice — Day 19 of Observation Period

Legal and Regulatory Reference Attachment | M.S. → Programme Support Team

Re: Google Cybersecurity Certificate—Notice of Record Finalization

1 message

M.S. <mosulg15@gmail.com>Mon, May 4, 2026 at 11:27 PM

To: careercertsupport@google.com, growwithgoogle@google.com

Cc: legal-notices@google.com, Google Skills Support <support+id2PER2K-ZV1V9@qwiklab.zendesk.com>, press@google.com <press@google.com>

Dear Grow with Google / Career Certificates Team,

This correspondence is issued in the spirit of transparency, understanding, and constructive engagement. It reflects the ongoing process in its current state and maintains procedural continuity without respect to any particular outcome.

Today marks the nineteenth (19th) business day since the submission of the Opportunity Alignment observation period of twenty (20) days.

The purpose of this communication is to note that the record is to be considered final upon the close of the twenty (20) business days provided for resolution.

Given that the opportunity for response remains available, any clarification or commentary, substantive or otherwise, would be deemed valuable and subject to careful consideration.

Should additional time be required for internal deliberation or coordination, even a brief acknowledgment to that effect would suffice as a meaningful indication to preserve continuance and open observation.

Otherwise, the record will be considered final at the identified period. This would be Tuesday May 05, 2026, 11:59 p.m. Pacific Time.

This serves to reiterate the acknowledgment and respect for Google's discretion and institutional capacity for ownership as the procedural basis for resolution.

As this will be the final submission to the record, I note the following disclaimer:

- On April 15th, I applied for a Research and Development Analyst role at Google.
- On April 17th, I was invited to take the Google Hiring Assessment.
- On April 22nd, I was notified of having passed the Google Hiring Assessment.

As of this moment, my candidacy is processing normally and continues unaffected.

It remains independent of the procedural basis of this structural matter.

Attached are audit excerpts from Section 4, relating Legal and Regulatory Relevance of the inquiry. The final attachment is served both as justification for good cause and effort, and as motivation of the same.

I want to thank Google for inspiring me to constructive engagement and I hope just the same—that Google has been inspired to constructive engagement.

Thank you for your continued attention to this matter.

Sincerely,

Mohamed S. Mohamed
Google Cybersecurity Certificate & CompTIA Security+ dual Credential

 Legal_and_Regulatory_Relevance.PDF

Section 4: Legal and Regulatory Relevance

4.1 FTC Section 5 — Unfair Acts and Practices

Section 5 of the Federal Trade Commission Act, 15 U.S.C. § 45, prohibits unfair or deceptive acts or practices in or affecting commerce. The Commission's Deception Policy Statement (1983) establishes three elements: a representation, omission, or practice that is likely to mislead consumers acting reasonably; and that is material to the consumer's decision. All three elements are satisfied.

Representation: The 'connect directly with employers,' 'employer recognized,' and '150 company consortium' claims are affirmative representations within the meaning of Section 5. They are not mere puffery, but describe a specific functional mechanism.

Likelihood to Mislead: A reasonable consumer reading 'connect directly with employers' within a certificate-holder platform would form the belief that the platform transmits some form of credential-linked information into the employer relationship. The mechanical impossibility finding establishes that this belief cannot be correct, regardless of how carefully the marketing language is parsed.

Materiality: The employer-connection and recognition claims were, as documented in the initial inquiry, 'the structure of the value proposition itself.' They were the reason for enrollment. Had the operational architecture been disclosed (redirect to public career page, no data transmission, no ATS effect) the enrollment decision would have been materially different for any rational consumer.

The FTC's 'net impression' standard, established in enforcement guidance and applied in *FTC v. Kraft, Inc.*, 970 F.2d 311 (7th Cir. 1992), also captures the interface design. The visual architecture of CareerCircle, including credential-linked tags, certificate-specific filters, and purpose-built platform branding, creates a net impression of functional integration between the credential and the employer relationship. That net impression is independently actionable as a representation, separate from the explicit marketing text.

4.2 FTC Enforcement Precedent on Educational Outcome Claims

The FTC has an established and recent enforcement record in the educational marketing space that provides direct precedent for the 75% and 70% outcome statistic and the direct employer-recognition claims:

FTC v. DeVry Education Group (2016, \$100M settlement): DeVry represented that 90% of graduates who actively sought employment found jobs in their field within six months. The FTC found the statistic was based on a self-selected survey population, defined 'in their field' broadly enough to capture unrelated employment, and was not independently verified. The parallel to the 75% claim is precise.

- **FTC v. Career Education Corporation (2019):** Settlement over misleading graduate employment rate claims where the definition of outcomes was structured to maximize reported figures without causal attribution to the program.
- **FTC v. National Beverage Corp. (2022):** Established that net impression liability extends to interface design and product positioning, not only to explicit textual claims.
- **FTC Policy Statement on Section 5 Unfair Methods of Competition (2022):** Reaffirmed the Commission's authority to act on structural misalignment between marketing and operational reality, independent of demonstrable individual harm.

4.3 The Collective Knowledge Doctrine

In *United States v. Bank of New England, N.A.*, 821 F.2d 844 (1st Cir. 1987), the First Circuit held that a corporation cannot plead ignorance by subdividing its knowledge across departments: 'The aggregate of those components constitutes the corporation's knowledge of a particular operation.' The doctrine is applicable here.

- Google Skills knows the certificate is marketed as a hiring pathway with employer recognition in evaluation systems. Google Hiring operates the ATS that produces instant rejections of certificate holders applying to roles the program tags as relevant. Google the legal entity is therefore charged with the combined knowledge of both departments.
- The technological triviality of integrating the Skills database with the Hiring ATS to ensure certificate holders receive at minimum a human review rather than automated pre-rejection means the failure to integrate is not a technical limitation. It is a design choice.
- Under Structural Scierter doctrine, a design choice made when the inference of misrepresentation is obvious and the corrective action is trivial constitutes willful blindness rather than innocent oversight.

4.4 State Consumer Protection — California and Washington

California Unfair Competition Law (Bus. & Prof. Code §§ 17200 et seq.): Prohibits unlawful, unfair, or fraudulent business practices. Under *McGill v. Citibank, N.A.*, 2 Cal. 5th 945 (Cal. 2017), pre-dispute arbitration agreements cannot waive the right to seek public injunctive relief in California courts. A UCL claim seeking an injunction requiring Google to correct its marketing representations is not subject to the Coursera arbitration waiver. Public injunctive relief seeking correction of program-wide marketing representations benefits the public and survives the class action waiver under McGill.

Washington Consumer Protection Act (RCW 19.86): Provides a private right of action for unfair or deceptive acts in trade or commerce with treble damages up to \$25,000 and attorney fee shifting upon prevailing. The complainant enrolled in, paid for, and relied upon representations made in connection with the Google Cybersecurity Certificate as a consumer and resident of Washington State. Consumer protection claims under the Washington Consumer Protection Act (RCW 19.86) attach to transactions entered into by Washington residents, regardless of the defendant's state of incorporation or principal place of business.

Both California and Washington reserve further independent interest in the accuracy of career credential marketing directed at residents through federal and state-supported workforce development programs.

4.5 Arbitration Clause — Coursera Terms of Use Analysis

Arbitration Clause — Binding Limitations on Private Claims Against Coursera

Coursera's Terms of Use (Section 15, effective January 1, 2026) include mandatory individual arbitration, a class action waiver, and a \$20 aggregate liability cap for claims against Coursera. Coursera expressly disclaims: 'Coursera does not guarantee licensure, certification or qualification for any profession or job on the basis of your completion of a Content Offering.' These provisions materially limit private litigation against Coursera. Regulatory submissions are explicitly excluded: 'This arbitration agreement does not preclude you or us from seeking action by federal, state, or local government agencies.' — Coursera ToS §15. All regulatory filings described in this report are unaffected. Claims against Google as a separate legal entity are not automatically bound by the Coursera-complainant arbitration agreement. Public injunctive relief under California UCL survives the class action waiver.

Good morning Mohamed,

Thank you for the thoughtful follow-up and for clarifying your questions—I appreciate how clearly you’ve laid this out.

To answer directly: you would not be able to see the specific account manager or opportunity owner tied to that posting. For roles like this—especially those posted by third parties or directly by large employers such as Google—the hiring organization often **intentionally routes all applicants through their own ATS** and withholds recruiter or account-owner contact details. That’s a deliberate choice on their side, and unfortunately there isn’t a mechanism for us to surface or bypass that contact information from the CareerCircle posting.
