the Senior Strategiest, Scams and Verifications Trust and Safety.... I've been sitting on it, still unsure if I even want to apply. I gave the institution nothing but consideration, and the received experience of containment was so unpalatable I cannot repeat that experience

On Tue, Jun 30, 2026, 10:57 PM M.S. <mosulg15@gmail.com> wrote:
What has transpired since

On the 17th of June, having not received a reply to my application status closure request, I sent in a meta statement which received the closure in the application status closure request, the application status was changed to "not proceeding" [the payload was intentional contradiction of my methodology]

Thanked the recruiter and the institution for their patience

Since the audit was never responded to, I responded to the May 7 de-escalation with a status update signifying resolution was still pending

Also on the 17, no longer having a conflict of interest, I merged the two tracks with a copy to the recruiter as context

On the 18th, I contacted Google PR individually with offer of a proton mail for private anonymous communication if the institution ever wanted to reach me considering the audit materials were now valuable and could be submitted to the FTC as contribution

On the 22nd, follow-up to Google PR with examples of the value including observations, the coursera support contradiction, and the april 16 CareerCircle admission re:mechanical impossibility which had been intentionally withheld during the candidacy having been received after april 15 application

On the 24, the declaration of exhaustion of remedies to the legal, pr, and program teams with introduction of the april 16 admission as an abrogation of logical deescalation #1 on May 7 and the offer of the private email as the same to logical deescalation 2, introduction of the beginning of public archiving with a github link

On the 25th, a 2nd promise to the institution following waiver of claims, this time a promise to make every reasonable effort to not embarrass the institution, attachment the publicly relevant materials from the previous attachment

On the 29th, last request for opportunity to respond and a clarification about the full scale of exposure affecting ESG portfolio, Attachment a methodology on the metric by the institution which is a almost exactly what caused careerstep judgement by the FTC

No further emails will be sent on this matter to the institution that is not a response

On Tue, Jun 16, 2026, 11:29 PM M.S. <mosulg15@gmail.com> wrote:
Let me fix legibility

April 7th was the day the 20 day observation was established. Without taking into consideration work days, 7+20= April 27th, with work days considered the 5th May

So 20 days observation given on the April 7th, giving the institution a grace period of 20 days to fix marketing quietly without communicating with me which if done I would consider resolution with complete confidentiality

The "Research and Development Analyst, Trust and Safety Monetization "role first appearance on the April 8th, this role with job description similar to what i had done in the February-April 2 audit, had no footprint in Institution organizational chart because it had no footprint in internet existence upon research

The Google Press notice on April 12th giving heads up about the 20 day observation offer for Institution to fix marketing

The role appearance on CareerCircle on April 13th.

My application sent on April 15th.

The GHA invite on April 17th.

Took on April 21st.

Passes on April 22nd.

April 27 would be end of 20 day observation if one assumed I wasn't counting business days only

April 28th the attempt to find information about application status, but also curious about institutional response, contacted GIS but GIS deflected so I utilized system knowledge to bypass to higher tier with more discretion but surprisingly GIS looped in the very recruiter of the application which I understood was supposed to be impossible to be preemptively found by an applicant. the recruiter gave their only response before but without even addressing me but Support as if the subject, even in the email I was merely copied, the candidate they were looped in for, containment language

Noteworthy reminder: April 28 would be the 1st day after 20 day observation if one assumed I wasn't going by business days; which would be reached without me having honored the terms of the observation according to their logic.

April 28 I sent in GIS exploit and patch after recruiter response understanding that I had gained privilege relative to standard applicant which should be system notified

Coursera Google Cybersecurity Group daily notification log changed on the 28th (27th was last received log, and confirmed with notification on coursera which had been changed from daily to limited, odd because I did not change it) [this would be contradictedly confirmed as a backend interface change due to Coursera-Google agreement later]

On the 30th I noticed the Inquiry ticket with Google Skills had been quietly closed which was forced open by my submission of the Normative Framework and the Human Dimensionthe ticket stayed open disrupting the pattern of other side changing ticket status to Awaiting your reply within hours of my submissions since the Addendum Findings

so between 29-30th my Skill support ticket quietly closed forced open by my submission of the Normative Framework designed to be a critique of that action.

30th was also announced the 17th day of the 20 day observation which shows it accounted for work days which would come as a surprise if one assumed the 27th was end of observation due to calendar days

MAY

on the 4th the day 19th deferral offer plus Legal Relevance attachments, the ticket resumed being changed to awaiting your reply after that submission

on the 5th the inquiry was closed by me at the lapse of the 20 day observation window

on the 6th the notice to Google legal, press, and program teams about the Regulatory Submission on 7th

7th May the notice to legal of logical deescalation and submission of first right of response to TandS.

7th the Submission of reframed audit to TandS through recruiter Katie

8th the contact architecture supplement to recruiter.

10th today the Research and Development Analyst no longer up on Google career or careercircle.

On 13th the mismatching 75% in the top card of the Grow with Google certificate page has been changed to 70% to reflect the middle section's 70%. They now both say 70%. Important issue highlighted in the audit submitted days ago to TandS recruiter.

Sent a recruiter ping on the 21st, no response. Standard recruiter initiation is 4-5 weeks longer than usual; I am in week 6.

On the 24th-25th I have taken up an older line of inquiry set aside...Coursera odd Google Cybersecurity group notification change back in April 28 during the temporal haze...a contradiction has been received

on the 26 research and development analyst role is back on Google Careers with different requisition

JUNE

on the 1st VCI, DCOTI, and RDA excerpts governance stack sent to recruiter announcing completion of conceptual expansions addressing the signal integrity finding

on June 2 since the recruiter was ignoring, went back to support to legitimately inquire about what the req change meant for application. they looped in recruiter which because of the exploit patch I refused to take advantage

on June 15, upon 2 months from application on April 15, sent an application status closure request asking for procedural clarification to recruiter

More coursera support engagements in that time frame which are a potentially highly relevant implication for the original credential audit concerning...

Senior Strategist, Scams and Verification Trust and Safety

Google Seattle, WA, USA Mid

Apply

i In accordance with Washington state law, we are highlighting our comprehensive benefits package, which is available to all eligible US based employees. Benefits for this role include:

- Health, dental, vision, life, disability insurance
- Retirement Benefits: 401(k) with company match
- Paid Time Off: 20 days of vacation per year, accruing at a rate of 6.15 hours per pay period for the first five years of employment
- Sick Time: 40 hours/year (increased to 69 hours/year for Seattle) including 5 discretionary sick days per instance
- Maternity Leave (Short-Term Disability + Baby Bonding): 28-30 weeks
- Baby Bonding Leave: 18 weeks
- Holidays: 13 paid days per year

Minimum qualifications:

- Bachelor's degree or equivalent practical experience.
- 4 years of experience in data analytics, trust and safety, policy, risk analysis, or related fields.
- Experience in SQL.

Preferred qualifications:

- Master's degree in Computer Science, Engineering, Mathematics, Statistics, or Analysis, or a related technical field.
- Experience with scripting and coding (e.g., Python, Java).
- Experience with fraud or policy investigations, fraud risk management, Internet advertising, or e-commerce.
- Experience in roles related to business analysis or statistical analysis/machine learning.
- Excellent problem-solving and critical thinking skills with attention to detail in an ever-changing environment.

About the job

Trust and Safety team members are tasked with identifying and taking on the biggest problems that challenge the safety and integrity of our products. They use technical know-how, excellent problem-solving skills, user insights, and proactive communication to protect users and our partners from abuse across Google products like Search, Maps, Gmail, and Google Ads. On this team, you're a big-picture thinker and strategic team-player with a passion for doing what's right. You work globally and cross-functionally with Google engineers and product managers to identify and fight abuse and fraud cases at Google speed - with urgency. And you take pride in knowing that every day you are working hard to promote trust in Google and ensuring the highest levels of user safety.

As a Senior Strategist in the Scams and Verification team, you will be responsible for protecting users from offline scams - scams which take place outside the Google Ads Platform. You will use data to provide recommendations to products and devise solutions (global and hyperlocal) to stay ahead of the fraudsters. You will also be responsible for ensuring good advertisers are provided the right opportunity to serve. You will use Applied AI, machine learning, or other techniques to optimize human review cost and efficiency while continuously identifying enforcement gaps and automation opportunities. You will collaborate with cross-functional teams to achieve your business goals and lead projects end-to-end. You will collaborate closely with engineers to develop algorithms and solve quality issues end-to-end.

At Google we work hard to earn our users' trust every day. Trust and Safety is Google's team of abuse fighting and user trust experts working daily to make the internet a safer place. We partner with teams across Google to deliver bold solutions in abuse areas such as malware, spam and account hijacking. A team of Analysts, Policy Specialists, Engineers, and Program Managers, we work to reduce risk and fight abuse across all of Google's products, protecting our users, advertisers, and publishers across the globe in over 40 languages. Individual pay is determined by factors including job-related skills, experience, and relevant education or training.

US: \$116000 - \$167000 (USD) + 15% bonus target + equity + benefits

Learn more about [benefits at Google](#).

Responsibilities

- Collaborate with cross-functional groups such as PM, Engineering, Sales, and Legal to drive projects that increases users' safety and provide better online experience through Google Ads.
- Apply advanced statistical methods and technical analysis to uncover sophisticated abuse vectors.
- Lead investigations into complex tactics, techniques, and procedures (TTPs) to perform actor tracking and disrupt organized fraud rings targeting Google Ads.
- Identify automation and efficiency opportunities and drive solutions through analysis or cross-functional partnerships.
- Provide periodic on-call coverage and drive the rapid response for high-severity adversarial incidents, plus conduct thorough root cause analyses (RCAs) to implement long-term structural preventions.

Preferred qualifications:

- Experience applying ML/AI in industry settings.
- Excellent communication and collaboration skills to communicate technical concepts with and influence cross-regional and cross-functional stakeholders at all levels.
- Excellent problem-solving and critical thinking skills with attention to detail in an ever-changing environment.

About the job

The mission of our team is to build an exceptional trusted ads ecosystem by predicting and mitigating emerging risks, ensuring safe and healthy growth for creators, publishers, advertisers, and end users.

We defend Google's ad products from fraud and abuse. We evaluate millions of publishers, analyze billions of events, and create scalable methods to stop bad actors and motivated fraudsters from causing harm. We understand the user's point of view and are passionate about using our technical, sales, and customer service acumen to protect them. When we get this right, we help users, advertisers, publishers, and Google harness information and monetize the internet safely and usefully.

As a Research and Development Analyst on the Trust and Safety Monetization team, you'll be responsible for future-proofing Google's ad ecosystem from invalid traffic and abuse. You'll work to discover abuse trends and signatures, take risks to seek out and deeply understand the unknown, and then share findings and concrete recommendations with our partner teams. You will collaborate with internal and external stakeholders to develop and improve our defenses, because we don't succeed unless they do.

The US base salary range for this full-time position is \$132,000-\$189,000 + bonus + equity + benefits. Our salary ranges are determined by role, level, and location. Within the range, individual pay is determined by work location and additional factors, including job-related skills, experience, and relevant education or training. Your recruiter can share more about the specific salary range for your preferred location during the hiring process.

Please note that the compensation details listed in US role postings reflect the base salary only, and do not include bonus, equity, or benefits. Learn more about [benefits at Google](#).

Responsibilities

- Partner closely with engineering teams to improve ad traffic infrastructure, defense systems, and workflows. Proactively identify and help implement efficiency improvements through advanced machine learning techniques, scaled defenses, and automation.
- Drive full lifecycle projects across product, engineering, and trust and safety teams to prevent abuse by improving policies and closing product vulnerabilities.
- Work collaboratively with teammates around the globe and deliver projects from beginning to end in a timely manner.
- Be exposed to potentially sensitive content or situations and possibly graphic, controversial, and/or upsetting topics or content as part of the role.
